SWEDISH IMMUNOLOGIST TO TEACH AT UM

MISSOULA--

Dr. Orjan T. G. Ouchterlony (pronounced Oran Ahkterlonie), professor and head of the Department of Medical Microbiology at the University of Goteborg, Sweden, will join the University of Montana microbiology staff in January 1972 as a Senior Foreign Scientist Fellow of the National Science Foundation (NSF).

The Swedish scientist was the candidate nominated by UM for the NSF fellowship.

Dr. Ouchterlony, a physician, teacher, laboratory scientist and specialist in immunology, will work through October 1972 with the UM Department of Microbiology and the Stella Duncan Research Institute at UM. He also will conduct lectures, seminars and act as consultant at research laboratories throughout the U.S.

The internationally renowned scientist is responsible for the introduction of Ouchterlony Immunodiffusion, or the technique used in determining the immune status of a vaccinated patient. The technique shows whether or not the patient is immune to the disease for which he has been vaccinated.

Dr. Ouchterlony is one of 59 Senior Foreign Scientist Fellows who will be associated with various college and university science departments throughout the U.S.
